

## **Seminar Two: Specifying sustainability. Key Topics**

- Why sustainable design should be considered at the beginning of the specification process
- How sustainable design and construction can minimise environmental impact, reduce energy consumption, protect health and wellbeing and build a prosperous green economy
- The key aspects of Indoor Environment Quality; air quality, acoustics and lighting
- How biophilic design can support a reconnection with nature in the built environment
- How biomimetic design could future proof our built environment.
